Int J Biomed Comput, 28 (1991) 301–303
Elsevier Scientific Publishers Ireland Ltd.

SUBJECT INDEX

Volume 28 (1991)

ARIMA models, predictions, Comté, information criterion, linear time series, 249
Automation, computerized dispensing system, prescription, pharmacy, 137

BASIC program, leukemia in mice, formula for survival predictions, 31
BASIC program, survival in malignant melanoma, formula for survival predictions, 151
Bayes' theorem, medical expert systems, probability theory, computer-assisted diagnosis, decision theory, probability learning, 1
Biological models, computer simulation, logistic models, proportional hazard models, exponential risk avoidance models, coronary disease, 181

Cell-cycle, compartmental model, maximum likelihood, parameter estimation, phase fraction, state-space, 231
Clinical test data, fuzzy set theory, relational database, hospital information, 289
Communication systems, picture archiving, PACS, 61
Compartmental model, cell-cycle, maximum likelihood, parameter estimation, phase fraction, state-space, 231
Computer-assisted diagnosis, medical expert systems, probability theory, Bayes' theorem, decision theory, probability learning, 1
Computer-assisted medical decision making, pattern recognition, fuzzy set theory, medical information processing, pattern recognition, performance bounds, 91
Computerized dispensing system, automation, prescription, pharmacy, 137
Computer aided software engineering, 4th generation languages, relational data base management system, graphic user interface, hospital information system, 101
Computer simulation, biological models, logistic models, proportional hazard models, exponential risk avoidance models, coronary disease, 181
Computer simulation, logistic models, exponential risk avoidance models, sensitivity studies, intervention studies, coronary disease, 205
Comté, ARIMA models, predictions, information criterion, linear time series, 249
Coronary disease, computer simulation, logistic models, exponential risk avoidance models, sensitivity studies, intervention studies, 205
Coronary disease, computer simulation, biological models, logistic models, proportional hazard models, exponential risk avoidance models, 181
Costs and cost analysis, radiology, digital radiography, length of stay, teleradiology, technology assessment, survey, 169
Council of Europe, health information systems, information technology, training, education, 117

Database, research methods, software, health care costs, 161
Decision theory, medical expert systems, probability theory, Bayes' theorem, computer-assisted diagnosis, probability learning, 1
Digital radiography, radiology, length of stay, teleradiology, costs and cost analysis, technology assessment, survey, 169

ECG signals, fiducial point detection, 127
Education, health information systems, information technology, training, Council of Europe, 117
EEG, multichannel adaptive segmentation, fuzzy cluster analysis, significant graphoelements identification, 71
Exponential risk avoidance models, computer simulation, biological models, logistic models, proportional hazard models, coronary disease, 181
Exponential risk avoidance models, computer simulation, logistic models, sensitivity studies, intervention studies, coronary disease, 205

Fiducial point detection, ECG signals, 127
Formula for survival predictions, BASIC program, survival in malignant melanoma, 151

Formula for survival predictions, BASIC program, leukemia in mice, 31
Fuzzy cluster analysis, EEG, multichannel adaptive segmentation, significant graphoelements identification, 71
Fuzzy set theory, pattern recognition, medical information processing, pattern recognition, performance bounds, computer-assisted medical decision making, 91
Fuzzy set theory, relational database, hospital information, clinical test data, 289

Gauss-Newton method, ionic currents, potassium channels, 47
Generation languages (4th), computer aided software engineering, relational data base management system, graphic user interface, hospital information system, 101
Graphic user interface, computer aided software engineering, 4th generation languages, relational data base management system, hospital information system, 101

Health care costs, database, research methods, software, 161
Health information systems, information technology, training, education, Council of Europe, 117
Hospital information, fuzzy set theory, relational database, clinical test data, 289
Hospital information system, computer aided software engineering, 4th generation languages, relational data base management system, graphic user interface, 101

Image analysis, perceptual testing, neurological screening, 269
Information criterion, ARIMA models, predictions, Comté, linear time series, 249
Information technology, health information systems, training, education, Council of Europe, 117
Intervention studies, computer simulation, logistic models, exponential risk avoidance models, sensitivity studies, coronary disease, 205
Ionic currents, Gauss-Newton method, potassium channels, 47

Length of stay, radiology, digital radiography, teleradiology, costs and cost analysis, technology assessment, survey, 169
Leukemia in mice, BASIC program, formula for survival predictions, 31
Linear time series, ARIMA models, predictions, Comté, information criterion, 249
Logistic models, computer simulation, exponential risk avoidance models, sensitivity studies, intervention studies, coronary disease, 205
Logistic models, computer simulation, biological models, proportional hazard models, exponential risk avoidance models, coronary disease, 181

Maximum likelihood, cell-cycle, compartmental model, parameter estimation, phase fraction, state-space, 231
Medical expert systems, probability theory, Bayes' theorem, computer-assisted diagnosis, decision theory, probability learning, 1
Medical information processing, pattern recognition, fuzzy set theory, pattern recognition, performance bounds, computer-assisted medical decision making, 91
Multichannel adaptive segmentation, EEG, fuzzy cluster analysis, significant graphoelements identification, 71

Neurological screening, image analysis, perceptual testing, 269

PACS, picture archiving, communication systems, 61
Parameter estimation, cell-cycle, compartmental model, maximum likelihood, phase fraction, state-space, 231
Pattern recognition, fuzzy set theory, medical information processing, pattern recognition, performance bounds, computer-assisted medical decision making, 91
Pattern recognition, pattern recognition, fuzzy set theory, medical information processing, performance bounds, computer-assisted medical decision making, 91
Perceptual testing, image analysis, neurological screening, 269
Performance bounds, pattern recognition, fuzzy set theory, medical information processing, pattern recognition, computer-assisted medical decision making, 91
Pharmacy, computerized dispensing system, automation, prescription, 137
Phase fraction, cell-cycle, compartmental model, maximum likelihood, parameter estimation, state-space, 231
Picture archiving, communication systems, PACS, 61
Potassium channels, ionic currents, Gauss-Newton method, 47
Predictions, ARIMA models, Comté, information criterion, linear time series, 249

Prescription, computerized dispensing system, automation, pharmacy, 137
Probability learning, medical expert systems, probability theory, Bayes' theorem, computer-assisted diagnosis, decision theory, 1
Probability theory, medical expert systems, Bayes' theorem, computer-assisted diagnosis, decision theory, probability learning, 1
Proportional hazard models, computer simulation, biological models, logistic models, exponential risk avoidance models, coronary disease, 181

Quality control, radioimmunoassay, software, 53

Radioimmunoassay, quality control, software, 53
Radiology, digital radiography, length of stay, teleradiology, costs and cost analysis, technology assessment, survey, 169
Relational database, fuzzy set theory, hospital information, clinical test data, 289
Relational data base management system, computer aided software engineering, 4th generation languages, graphic user interface, hospital information system, 101
Research methods, database, software, health care costs, 161

Sensitivity studies, computer simulation, logistic models, exponential risk avoidance models, intervention studies, coronary disease, 205
Significant graphoelements identification, EEG, multichannel adaptive segmentation, fuzzy cluster analysis, 71
Software, database, research methods, health care costs, 161
Software, radioimmunoassay, quality control, 53
State-space, cell-cycle, compartmental model, maximum likelihood, parameter estimation, phase fraction, 231
Survey, radiology, digital radiography, length of stay, teleradiology, costs and cost analysis, technology assessment, 169
Survival in malignant melanoma, BASIC program, formula for survival predictions, 151

Technology assessment, radiology, digital radiography, length of stay, teleradiology, costs and cost analysis, survey, 169
Teleradiology, radiology, digital radiography, length of stay, costs and cost analysis, technology assessment, survey, 169
Training, health information systems, information technology, education, Council of Europe, 117

Int J Biomed Comput, 28 (1991) 305
